

## Case Study

# Woodgreen and Chase Farm Reservoirs

Bournemouth and West Hampshire Water, Dorset

## Woodgreen and Chase Farm Reservoirs

Southern Concrete Services were selected to provide waterproofing to two new reservoirs being constructed by Clancy Docwra for Bournemouth and West Hampshire Water.

The challenge lay in finding a suitable product to cope with seasonal variations in weather conditions which was quite difficult due to the works being carried out in the winter months.

However, Southern Concrete Services and Flexcrete came up with a solution for the waterproofing works. This involved Flexcrete specifying a cementitious elastomeric waterproofing product called Cemprotect elastic. This was successfully applied by Southern Concrete Services in two applications to provide a finished waterproof system to the reservoirs.

### Project Outline

**Application:**

*Waterproofing*

**Main Contractor:**

*Clancy Docwra*

**Supplier:**

*Flexcrete*
